AppliedCS

Helping institutions manage compliance & risk

Risk Assessment

<u>IT Risk Assessments</u> require the knowledge, expertise, and dedication of time in order to complete this critical piece of your <u>Information Security program</u>. Applied Compliance Services has over 100 years of experience with bank operations in a variety of financial institutions. We understand how to establish and shore up the foundation of your program so you can avoid the common pitfalls many institutions struggle to avoid.

Our process for completing a comprehensive <u>Risk Assessment</u> involves a number of strategies including interviews with key personnel and review of the Information Security Program. The assignment of rating criteria including Information Sensitivity Classification, Criticality, Likelihood, and Impact of all known threats are used to calculate Inherent Risk of each asset. The controls are then reviewed allowing the assignment of Residual Risk.

We have developed a scalable <u>Risk Assessment framework</u>, allowing for a complete overhaul of your <u>Risk assessment program,</u> or an update to an existing <u>IT Risk Assessment Program</u>, which will meet your regulatory needs.

Please give us a call if you're considering <u>Outsourced Risk Assessment</u> and you need quick, professional assistance.
